environment / We use renewable and natural materials.

CO_2 6,3 kg

Thisindex shows the emission of CO2 and other pollutants in kilograms (kg) throughout the whole manufacturing process (from raw materials to the finished product) as well as of the transport from the production site to the points of sale.
1 kg CO2 is roughly equivalent to seven km by car or six km by plane.
If the index is accompanied by the term 'neutral', this means that the CO2 emission has been offset by Switcher through myclimate.

Social / We advocate fair trade and social working conditions.

Fair Wear Foundation (FWF) is a European multi-stakeholder initiative, which strives for fair working conditions in the garment industry worldwide. FWF verifies effective implementation of the code of conduct by its member companies and their suppliers.
Switcher was the first Swiss textile company to become a member of FWF in 2006.
The companies commit themselves to respecting the following labour standards:

- Employment is freely chosen
- No discrimination in employment
- No exploitation of child labour
- Freedom of association and the right to collective bargaining
- Payment of a living wage
- No excessive working hours
- Safe and healthy working conditions
- Legally binding employment relationship

Health & Safety / Whenever possible we avoid substances which are harmful to health.

European Chemicals Legislation. REACH is the Regulation for Registration, Evaluation, Authorisation and Restriction of Chemicals which has been in force since June 2007. Since that date, all products which are sold on the European market must be produced in compliance with REACH. The REACH regulation aims to respond rapidly and at global level when harmful substances are detected. Further information is available at national REACH helpdesks and Health Authorities in every country.

Textiles tested for harmful substances. Oeko-Tex® Standard 100 is a standardized worldwide testing and certification system for textile products at all stages of processing. This label shows that the model complies to the Oeko-Tex® Standard 100 criteria. The pollutant tests cover substances which are prohibited and regulated by law, chemicals which are known to be harmful to health and parameters for health protection.

H2O

H_2O 1238 L

This index represents the impact of water use and pollution at every stage of the life cycle from raw material production through to the retail outlets. This impact takes account of all the quantities of water which are consumed and polluted, having regard to their availability at the place of use.

SA-ISO

SA8000 is a certifiable standard for working conditions and workers rights in production and service companies. It promotes the introduction of a management system for implementation and compliance with this standard. For products carrying the label, at least one supplier in the supply chain is SA8000 certified.

Made with respect

Respect and Transparency are essential values of the Switcher philosophy and are closely bound up with economic efficiency, environmental responsibility and social solidarity. Following its corporate policy of sustainable development, Switcher preferably uses natural and recyclable materials and guarantees respecting the employment conditions of workers throughout the production chain. All our commercial partners share this mission with us, helping us to ensure that the future generations' living conditions are not compromised.
